CARE & MAINTENANCE DOCUMENT

PREMIUM SOLUTION FOR DOORS

Care & Maintenance

- Wipe the surface regularly using a slightly damp and soft cloth containing warm or soapy water.
- Always ensure that you check the recommendations provided by the cleaning product manufacturer before using it on the wrapped profiles. Always apply on a small area of the profile and check if there is any adverse effect on the profile skin.
- For stains please use a water based mild cleaning spray and rub softly with a soft cloth. Make sure you dry the surface thoroughly with the soft dry cloth without leaving any residue of the spray.
- Avoid any sharp objects near the profiles especially in the kitchen area. Also make sure if installing on the kitchen area the kitchen exhaust is working fine to avoid steam and oil vapours from affecting the profile surface.
- Avoid using any abrasive cleaners, acids, alkalis, thinners, turpentine, bleach, Acetone or any cleaning agents having organic solvents.

Storage & Handling

Storage and Handling of the products should be done with utmost care of our products. The following recommendations should be adhered to ensure the products are kept in good conditions at site before or while installation.

- The profiles should be stored in a dry space avoiding direct sunlight and rain to negate any effect on the product from rapid change in temperature.
- The Packed profiles should be kept away from any possible areas of mechanical or physical damage.
- Try and keep the working area free from any contaminants like dust, water, oil, abrasive surfaces etc. that could potentially scratch the decorative wrapped paper surface on the profiles.
